Blood Collection (finger prick DBS) - SOPDRG009S

COLLECTION INSTRUCTIONS

The following instructions must be completed for this test. Please print this information so that it can used for reference at the appointment. If any of the below tasks cannot be completed, call Crystal Health immediately on 0161 707 4935.

1) Prior to the sample collection ensure you have all the required equipment and that all blood collection devices are within their expiry date- refer to sample collection materials document

2) Prepare the Cansford sample envelope by completing the test details from the Envelope instruction- sent via email (text in red) see picture in trouble shooting and guidance

3) Complete all sections highlighted in yellow on the Hair/Blood Collection & Consent form with the donor. Ensure the consent section has also been signed by the donor

4) Ask the donor for photographic ID (passport/driving licence) and record type & unique number on the sample envelope and the collection & consent form see trouble shooting and guidance

5) Complete all relevant sections on the sample envelope including any medication taken within the last month.

6) Put on a pair of gloves and prepare the sample kit

7) Open the blood collection cassette and bend the white plastic edge away from the clear plastic collection area to expose the collection capillary tubes.

8) Ask the donor to rub their hands together to increase blood flow.

9) Suggest the thumb on the non-dominant hand is used. The area slightly to the side of the fleshy part of the fingertip should be used. see picture in trouble shooting and guidance

10) Clean the area using the pre-injection wipe provided and then dry with the gauze pad provided.

11) Use the lancet to puncture the skin, then massage the thumb towards the tip. The blood collection must be performed quite quickly to ensure blood does not coagulate.

12) Using the gauze wipe away the first drop of blood that is produced see picture in trouble shooting and guidance

13) Massage the punctured thumb towards the tip again and wait for a second blood drop to form. Firmly squeeze the thumb to produce more blood.

14) Without touching the finger with the blood collection card, hold the device to the blood droplet. align the first capillary collection tube to the blood drop and the blood will be sucked into the collection tube

15) Ensure that dot at the end of the capillary tube is full before moving on to the next collection tube. see picture in trouble shooting and guidance

16) Repeat this process until all 4 capillary tubes are full and the dot at the end of each is full. see picture in trouble shooting and guidance You may need to massage the finger each time to produce more blood.

17) Apply the plaster or gauze to stop any further bleeding.

18) Close the device quickly to allow blood spot to transfer on to the paper within the cassette. The blood spot will be visible in the round windows on the outer cassette. see picture in trouble shooting and guidance

19) Place cassette in to the completed Cansford envelope. Seal with the tamper strip and ask the donor to date and initial this. see picture in trouble shooting and guidance

20) Ask the donor to read and sign the consent declaration on the sample envelope (shaded grey area)

21) Return the tamper sealed envelope and all documentation (including your invoice) to Crystal Health using the Special Delivery envelope provided, on the same day as collection.
